

## PRACTICE LAB ASSIGNMENT 3

1. Write a program to check whether a year entered by the user is a leap year or not. (Make use of % operator).

### CODE

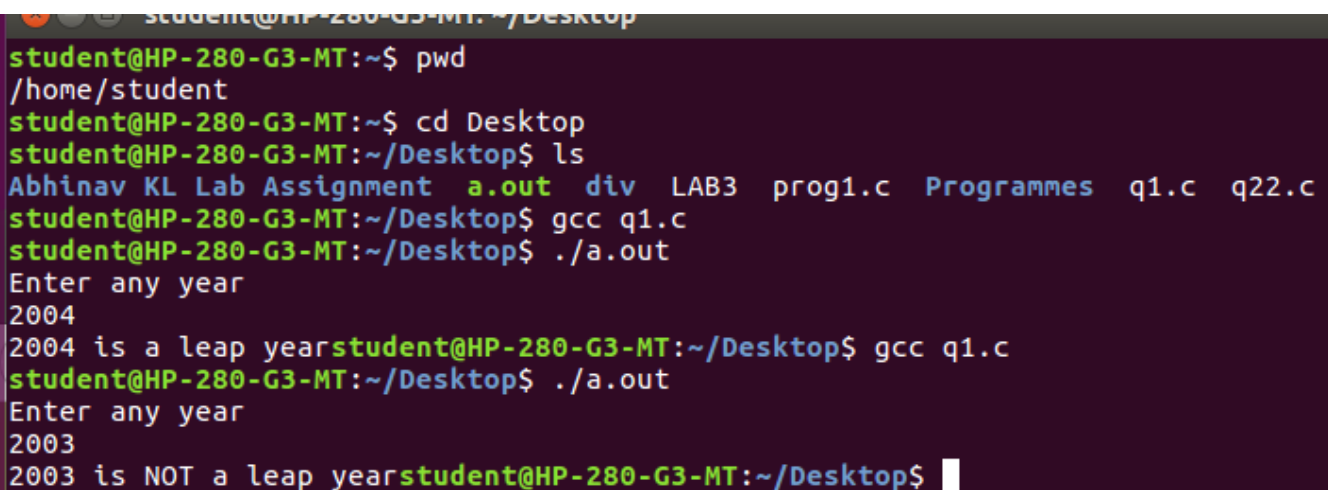

```
#include<stdio.h>

int main()
{
    int n;
    printf("Enter any year\n");
    scanf("%d", &n);

    if(n%4 == 0)
        printf("%d is a leap year", n);
    else
        printf("%d is NOT a leap year", n);
    return 0;
}
```

```
#include<stdio.h>
int main()
{
    int n;
    printf("Enter any year\n");
    scanf("%d", &n);
    if(n%4 == 0)
        printf("%d is a leap year", n);
    else
        printf("%d is NOT a leap year", n);
    return 0;
}
```

### SS of the OUTPUT

```
student@HP-280-G3-MT: ~/Desktop
student@HP-280-G3-MT:~$ pwd
/home/student
student@HP-280-G3-MT:~$ cd Desktop
student@HP-280-G3-MT:~/Desktop$ ls
Abhinav KL Lab Assignment  a.out  div  LAB3  prog1.c  Programmes  q1.c  q22.c
student@HP-280-G3-MT:~/Desktop$ gcc q1.c
student@HP-280-G3-MT:~/Desktop$ ./a.out
Enter any year
2004
2004 is a leap year
student@HP-280-G3-MT:~/Desktop$ gcc q1.c
student@HP-280-G3-MT:~/Desktop$ ./a.out
Enter any year
2003
2003 is NOT a leap year
student@HP-280-G3-MT:~/Desktop$
```

2. Using conditional operator, determine:

(a) Whether the character entered through the keyboard is a lower case alphabet or not.

CODE

```
#include<stdio.h>
```

```
void main()
```

```
{
```

```
char c;
```

```
printf("Enter a alphabet to know if it's a lowercase character")/c;
```

```
scanf("%c", &c);
```

```
if (97 <= c && c <= 122)
```

```
printf("Your letter is a lowercase character");
```

```
else
```

```
printf("Your letter is NOT a lowercase character");
```

```
}
```

```
1#include<stdio.h>
2void main()
3{
4char c;
5printf("Enter a alphabet to know if it's a lowercase
character")/c;
6scanf("%c", &c);
7if (97 <= c && c <= 122)
8printf("Your letter is a lowercase character");
9else
10printf("Your letter is NOT a lowercase character");
11}
```

SS of the OUTPUT

```
student@HP-280-G3-MT:~$ pwd
/home/student
student@HP-280-G3-MT:~$ cd Desktop
student@HP-280-G3-MT:~/Desktop$ ls
a.out  intro-code  q2.1.c  q2.2.c
student@HP-280-G3-MT:~/Desktop$ gcc q2.1.c
student@HP-280-G3-MT:~/Desktop$ ./a.out
Enter a alphabet to know if it's a lowercase character r
Your letter is a lowercase character
student@HP-280-G3-MT:~/Desktop$ ./a.out
Enter a alphabet to know if it's a lowercase character R
Your letter is NOT a lowercase character
student@HP-280-G3-MT:~/Desktop$
```

(b) Whether the character entered through the keyboard is a special symbol or not.

## CODE

```
#include<stdio.h>
```

```
void main()
```

```
{
```

```
char c;
```

```
printf("Enter a character to ensure if its a special symbol or not");
```

```
scanf("%c", &c);
```

```
if (32 <= c && c <= 47 || 58 <= c && c <= 64 || 91 <= c && c <= 96 || 123 <= c && c <= 126)
```

```
printf("Your character is a special symbol");
```

```
else
```

```
printf("Your character is NOT a special symbol");
```

```
}
```

## SS of the OUTPUT

```
student@HP-280-G3-MT: ~/Desktop
student@HP-280-G3-MT:~$ pwd
/home/student
student@HP-280-G3-MT:~$ cd Desktop
student@HP-280-G3-MT:~/Desktop$ ls
a.out  intro-code  Q21  q2.1.c  q2.2.c
student@HP-280-G3-MT:~/Desktop$ gcc q2.2.c

Your character is a special symbolstudent@HP-280-G3-MT:~/Desktop$ ./a.out
Enter a character to ensure if its a special symbol or notG
Your character is NOT a special symbolstudent@HP-280-G3-MT:~/Desktop$
```

3. Write a Program to input day number (considering Monday to be the 1st Day) and print week day.

## CODE

```

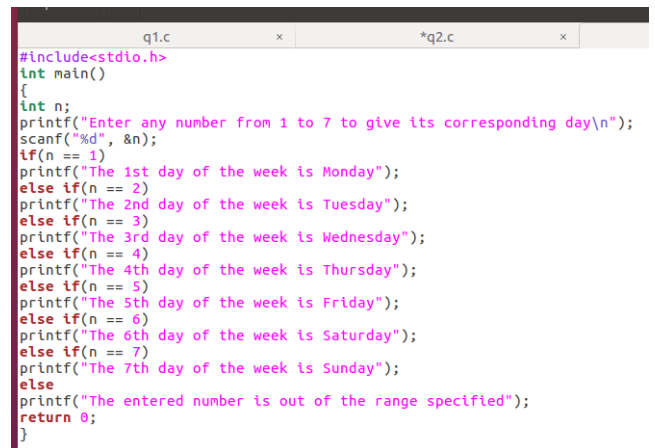

#include<stdio.h>

int main()
{
    int n;

    printf("Enter any number from 1 to 7 to give its corresponding day\n");
    scanf("%d", &n);

    if(n == 1)
        printf("The 1st day of the week is Monday");
    else if(n == 2)
        printf("The 2nd day of the week is Tuesday");
    else if(n == 3)
        printf("The 3rd day of the week is Wednesday");
    else if(n == 4)
        printf("The 4th day of the week is Thursday");
    else if(n == 5)
        printf("The 5th day of the week is Friday");
    else if(n == 6)
        printf("The 6th day of the week is Saturday");
    else if(n == 7)
        printf("The 7th day of the week is Sunday");
    else
        printf("The entered number is out of the range specified");
    return 0;
}

```

```

q1.c x *q2.c x
#include<stdio.h>
int main()
{
    int n;
    printf("Enter any number from 1 to 7 to give its corresponding day\n");
    scanf("%d", &n);
    if(n == 1)
        printf("The 1st day of the week is Monday");
    else if(n == 2)
        printf("The 2nd day of the week is Tuesday");
    else if(n == 3)
        printf("The 3rd day of the week is Wednesday");
    else if(n == 4)
        printf("The 4th day of the week is Thursday");
    else if(n == 5)
        printf("The 5th day of the week is Friday");
    else if(n == 6)
        printf("The 6th day of the week is Saturday");
    else if(n == 7)
        printf("The 7th day of the week is Sunday");
    else
        printf("The entered number is out of the range specified");
    return 0;
}

```

**SS of the OUTPUT**

8. A company insures its drivers in the following cases:

- If the driver is married.

- If the driver is unmarried, male & above 30 years of age.
- If the driver is unmarried, female & above 25 years of age.

In all other cases the driver is not insured. If the marital status, gender and age of the driver are the inputs, write a program to determine whether the driver is to be insured or not.

#### CODE

```
#include<stdio.h>
```

```
void main()
```

```
{
```

```
char m, g;
```

```
int a;
```

```
printf("Enter your marital status Y/N, gender M/F, age in one line")/m, g, a;
```

```
scanf("%c%c%d", &m, &g, &a);
```

```
if (m == 'Y')
```

```
printf("You are insured by the company");
```

```
else if(m == 'N' && g == 'M' && a > 30 || m == 'N' && g == 'F' && a > 25)
```

```
printf("You are insured by the company");
```

```
else if(m == 'N' && g == 'M' && a <= 30 || m == 'N' && g == 'F' && a <= 25)
```

```
printf("You are NOT insured by the company");
```

```
}
```

```
1#include<stdio.h>
2void main()
3{
4char m, g;
5int a;
6printf("Enter your marital status Y/N, gender M/F, age in
one line")/m, g, a;

10. An Insurance company follows following rules to calculate premium.

(1) If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city and is a male then the premium is Rs. 4 per thousand and his policy amount cannot exceed Rs. 2 lakhs.

(2) If a person satisfies all the above conditions except that the gender is female, then the premium is Rs. 3 per thousand and her policy amount cannot exceed Rs. 1 lakh.

(3) If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male, then the premium is Rs. 6 per thousand and his policy cannot exceed Rs. 10,000.

(4) In all other cases, the person is not insured.

Write a program to output whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

## CODE

```
#include<stdio.h>
```

```
void main()
